GitHub — Portfolio

Profile

Final-year Computer Science student with experience building backend and full-stack applications using Python, FastAPI, PostgreSQL, SQLAlchemy, React, Node.js, and Express.js. Developed REST APIs, authentication systems, workflow management tools, and database-driven applications through academic and personal projects.

Technical Skills

Languages: Python, JavaScript

Frontend: HTML5, CSS3, JavaScript, ReactJS, Bootstrap

Backend: FastAPI, REST APIs, JWT Authentication, SQLAlchemy ORM, Node.js, Express.js

Databases: PostgreSQL, MongoDB, MySQL

Tools & Platforms: Git, GitHub, GitLab, Linux, Bash, Postman, VS Code

Familiar: Java, PHP

Projects

DevTrack – API Monitoring and Logging Platform

GitHub

FastAPI, PostgreSQL, SQLAlchemy, APScheduler, JWT Authentication

- Built an API monitoring platform using FastAPI, PostgreSQL, and SQLAlchemy for tracking endpoint availability, response times, and uptime metrics.
- Designed REST APIs for authentication, endpoint management, monitoring history, analytics, and status reporting.
- Implemented JWT authentication, bcrypt password hashing, OTP email verification, and password-reset workflows.
- Developed scheduled monitoring jobs using APScheduler to perform automated health checks and record response metrics.
- Generated uptime statistics, response-time analytics, and historical monitoring reports from collected endpoint data.

Multi-Modal Prompt Refinement System

GitHub

FastAPI, Tesseract OCR

- Developed a FastAPI-based content processing system capable of extracting text from PDF, DOCX, TXT, and image files.
- Built OCR pipelines using Tesseract OCR, image preprocessing, and text normalization for reliable content extraction.
- Designed rule-based prompt refinement logic to transform unstructured documents into structured JSON outputs.
- Implemented ambiguity detection and missing-information validation to improve processing reliability and transparency.
- Created a modular file-processing architecture supporting multiple document formats and extraction workflows.

TaskFlow – Workflow and Task Management System

GitHub Live Demo

ReactJS, Node.js, Express.js, MongoDB

- Built a Kanban-style workflow management application using React, Node.js, Express.js, and MongoDB.
- Implemented drag-and-drop task progression across workflow stages using DnD Kit with synchronized backend persistence.
- Developed REST APIs for authentication, task creation, workflow updates, and task lifecycle management.
- Designed role-based workflow restrictions and stage-validation logic to enforce controlled task movement.
- Integrated React state management, API communication, and MongoDB persistence for real-time workflow tracking.

Experience

Full Stack Developer Intern

Feb 2026 – Apr 2026

Codiconic

- Developed foundational backend development skills using PHP, including procedural and object-oriented programming concepts.
- Worked with MySQL databases to perform data storage, retrieval, and query operations for web applications.
- Explored Symfony framework fundamentals, including routing, controllers, templates, and application structure.
- Practiced Git workflows, debugging techniques, and development within Linux-based environments.

Education

Bachelor of Engineering – Computer Science & Design

2023 – 2026

SVIT, Vasad — CGPA: 8.18

Diploma in Information Technology

2020 – 2023

Sigma Institute of Technology — CGPA: 7.96
