Profile

Python backend developer with hands-on experience building REST APIs, authentication systems, and database-driven applications through personal projects. Experienced with FastAPI, SQL/NoSQL databases, and backend architecture. Comfortable working in Linux environments, debugging backend systems, and developing scalable applications.

Technical Skills

Languages: Core Python, JavaScript, Java, PHP

Frontend: HTML5, CSS3, JavaScript, ReactJS, Bootstrap

Backend: FastAPI, Node.js, Express.js

Databases: PostgreSQL, MongoDB, MySQL

Tools & Platforms: Git, GitHub, GitLab, Linux, Bash, Postman, VS Code

Core Concepts: REST APIs, Backend Development, Authentication Systems, Database Design, Networking, Operating Systems

Additional: Tesseract OCR, JSON Structuring, API Testing

Experience

Full Stack Developer Intern

Feb 2026 – Apr 2026

Codiconic

- Developed and maintained backend features, database workflows, and REST API integrations in Linux-based development environments.
- Worked with SQL queries, database updates, data validation, and backend feature implementation.
- Resolved backend issues, optimized application workflows, and improved API reliability across internal projects.
- Integrated frontend and backend systems using REST APIs, AJAX, JavaScript, and PHP.
- Collaborated on debugging, testing, Git-based version control workflows

Projects

DevTrack – API Monitoring and Logging Platform

GitHub

FastAPI, PostgreSQL, APScheduler, JWT Authentication

- Developed a backend monitoring platform for tracking API uptime, response times, endpoint failures, and monitoring history using FastAPI and PostgreSQL.
- Built modular REST APIs for endpoint management, monitoring history, authentication, and status tracking.
- Designed JWT authentication workflows with OTP email verification, secure token handling, and protected API routes.
- Automated endpoint health checks and monitoring workflows using APScheduler for uptime tracking and failure detection.
- Implemented structured logging and failure analysis mechanisms for monitoring API reliability and performance.

Multi-Modal Prompt Refinement System

GitHub

FastAPI, Tesseract OCR

- Developed a FastAPI-based backend system for extracting and refining unstructured content from PDF, DOCX, TXT, and image files.
- Built OCR pipelines using Tesseract for image-based text extraction, preprocessing, and normalization.
- Implemented prompt-refinement workflows for converting extracted content into structured JSON outputs.
- Added ambiguity detection and missing-information handling mechanisms to improve output reliability and validation.
- Explored AI-assisted content processing and structured backend automation workflows.

TaskFlow – Workflow and Task Management System

GitHub Live Demo

ReactJS, Node.js, Express.js, MongoDB

- Built a workflow-oriented task management platform using ReactJS, Node.js, Express.js, and MongoDB.
- Implemented drag-and-drop task progression across workflow stages using DnD Kit with real-time UI synchronization.
- Built REST APIs for task creation, workflow updates, persistence, and task management operations.
- Designed controlled workflow logic with stage-based task validation and state management mechanisms.
- Integrated frontend and backend systems for dynamic workflow tracking and task operations.

Education

Bachelor of Engineering – Computer Science & Design

2023 – 2026

SVIT, Vasad — CGPA: 8.18

Diploma in Information Technology

2020 – 2023

Sigma Institute of Technology — CGPA: 7.96
