

Sameed Shaikh

Vadodara, Gujarat — sameedshaikh346@gmail.com — +91-7984786164
github.com/Sameed995 — Portfolio

Profile

Backend Developer with experience building web applications, REST APIs, authentication systems, and database-driven platforms using Python, FastAPI, Node.js, PostgreSQL, MongoDB, and MySQL. Passionate about backend development, scalable systems, and software engineering.

Technical Skills

Languages: Python, JavaScript

Backend: FastAPI, Node.js, Express.js, REST APIs, SQLAlchemy ORM, JWT Authentication

Databases: PostgreSQL, MongoDB, MySQL

Frontend: React.js, HTML, CSS, JavaScript

Tools & Platforms: Git, GitHub, GitLab, Linux, Bash, Postman, VS Code, Cloudflare Pages, Render

Familiar With: PHP

Experience

L.A.M.P Stack Developer Intern

Feb 2026 – Apr 2026

Codiconic

- Developed and maintained backend functionality using PHP and MySQL for web-based applications.
- Worked with relational databases to perform data storage, retrieval, query optimization, and CRUD operations.
- Explored application features using Symfony framework components including routing, controllers, and templates.
- Collaborated using Git-based workflows and performed debugging within Linux development environments.

Projects

DevTrack – API Monitoring and Logging Platform

GitHub

FastAPI, PostgreSQL, SQLAlchemy, APScheduler, JWT Authentication

- Built a monitoring platform using FastAPI, PostgreSQL, and SQLAlchemy to track API uptime, response latency, and endpoint availability.
- Designed REST APIs for authentication, endpoint management, monitoring history, analytics, and reporting.
- Implemented JWT authentication, bcrypt password hashing, OTP-based email verification, and password-reset workflows.
- Developed scheduled monitoring jobs using APScheduler to automate endpoint health checks and metric collection.
- Integrated frontend and backend services through REST APIs for real-time monitoring and visualization of application metrics.

Multi-Modal Prompt Refinement System

GitHub

FastAPI, Tesseract OCR, Python

- Developed a FastAPI-based document processing system capable of extracting content from PDF, DOCX, TXT, and image files.
- Built OCR pipelines using Tesseract OCR, image preprocessing, and text normalization techniques for reliable extraction.
- Designed rule-based prompt refinement workflows to convert unstructured content into structured JSON outputs.
- Implemented ambiguity detection and missing-information validation to improve processing reliability.
- Created a modular architecture supporting multiple file formats and reusable extraction workflows.
- Designed structured output generation pipelines for LLM-assisted document processing and automation use cases.

Task Management System

Live Demo — GitHub

MongoDB, Express.js, React.js, Node.js, JWT Authentication

- Developed a full-stack task management application using MongoDB, Express.js, React.js, and Node.js.
- Developed responsive React-based user interfaces and RESTful backend APIs for task management workflows.
- Implemented backend logic for drag-and-drop Kanban task management functionality.
- Implemented frontend state management, API integration, authentication flows, and database-driven task operations.
- Deployed the frontend on Cloudflare Pages and backend on Render.
- Implemented authentication and protected API routes for secure user access.

Education

Bachelor of Engineering – Computer Science & Design

2023 – 2026

SVIT, Vasad — CGPA: 8.18

Diploma in Information Technology

2020 – 2023

Sigma Institute of Technology — CGPA: 7.96
